

Introducing CardStarter: The first insured cross-chain accelerator for Cardano.

CardStarter is a decentralized accelerator and swapping platform, connecting early stage Cardano innovators and projects with our community of donors.

We provide \$CARDS holders early access and guaranteed allocation to seed rounds, presales, and private sales of Cardano projects.

By utilizing CardStarter, developers building on the Cardano Network will have an avenue to generate early support through the ERC20 network.

How Does This Work?

Launch Pads and accelerators can be a great avenue for trusted and vetted teams to gain early support, and for donors to gain early access to projects. CardStarter is the first insured, decentralized fundraising platform for the Cardano Network.

Launching on the Ethereum network allows us to build our community, and provide a proof of concept by raising preliminary support for successfully screened projects building on Cardano's network.

As soon as projects can deploy through Cardano's Plutus Platform, CardStarter will migrate the entire project, platform, and community from Ethereum.

Features

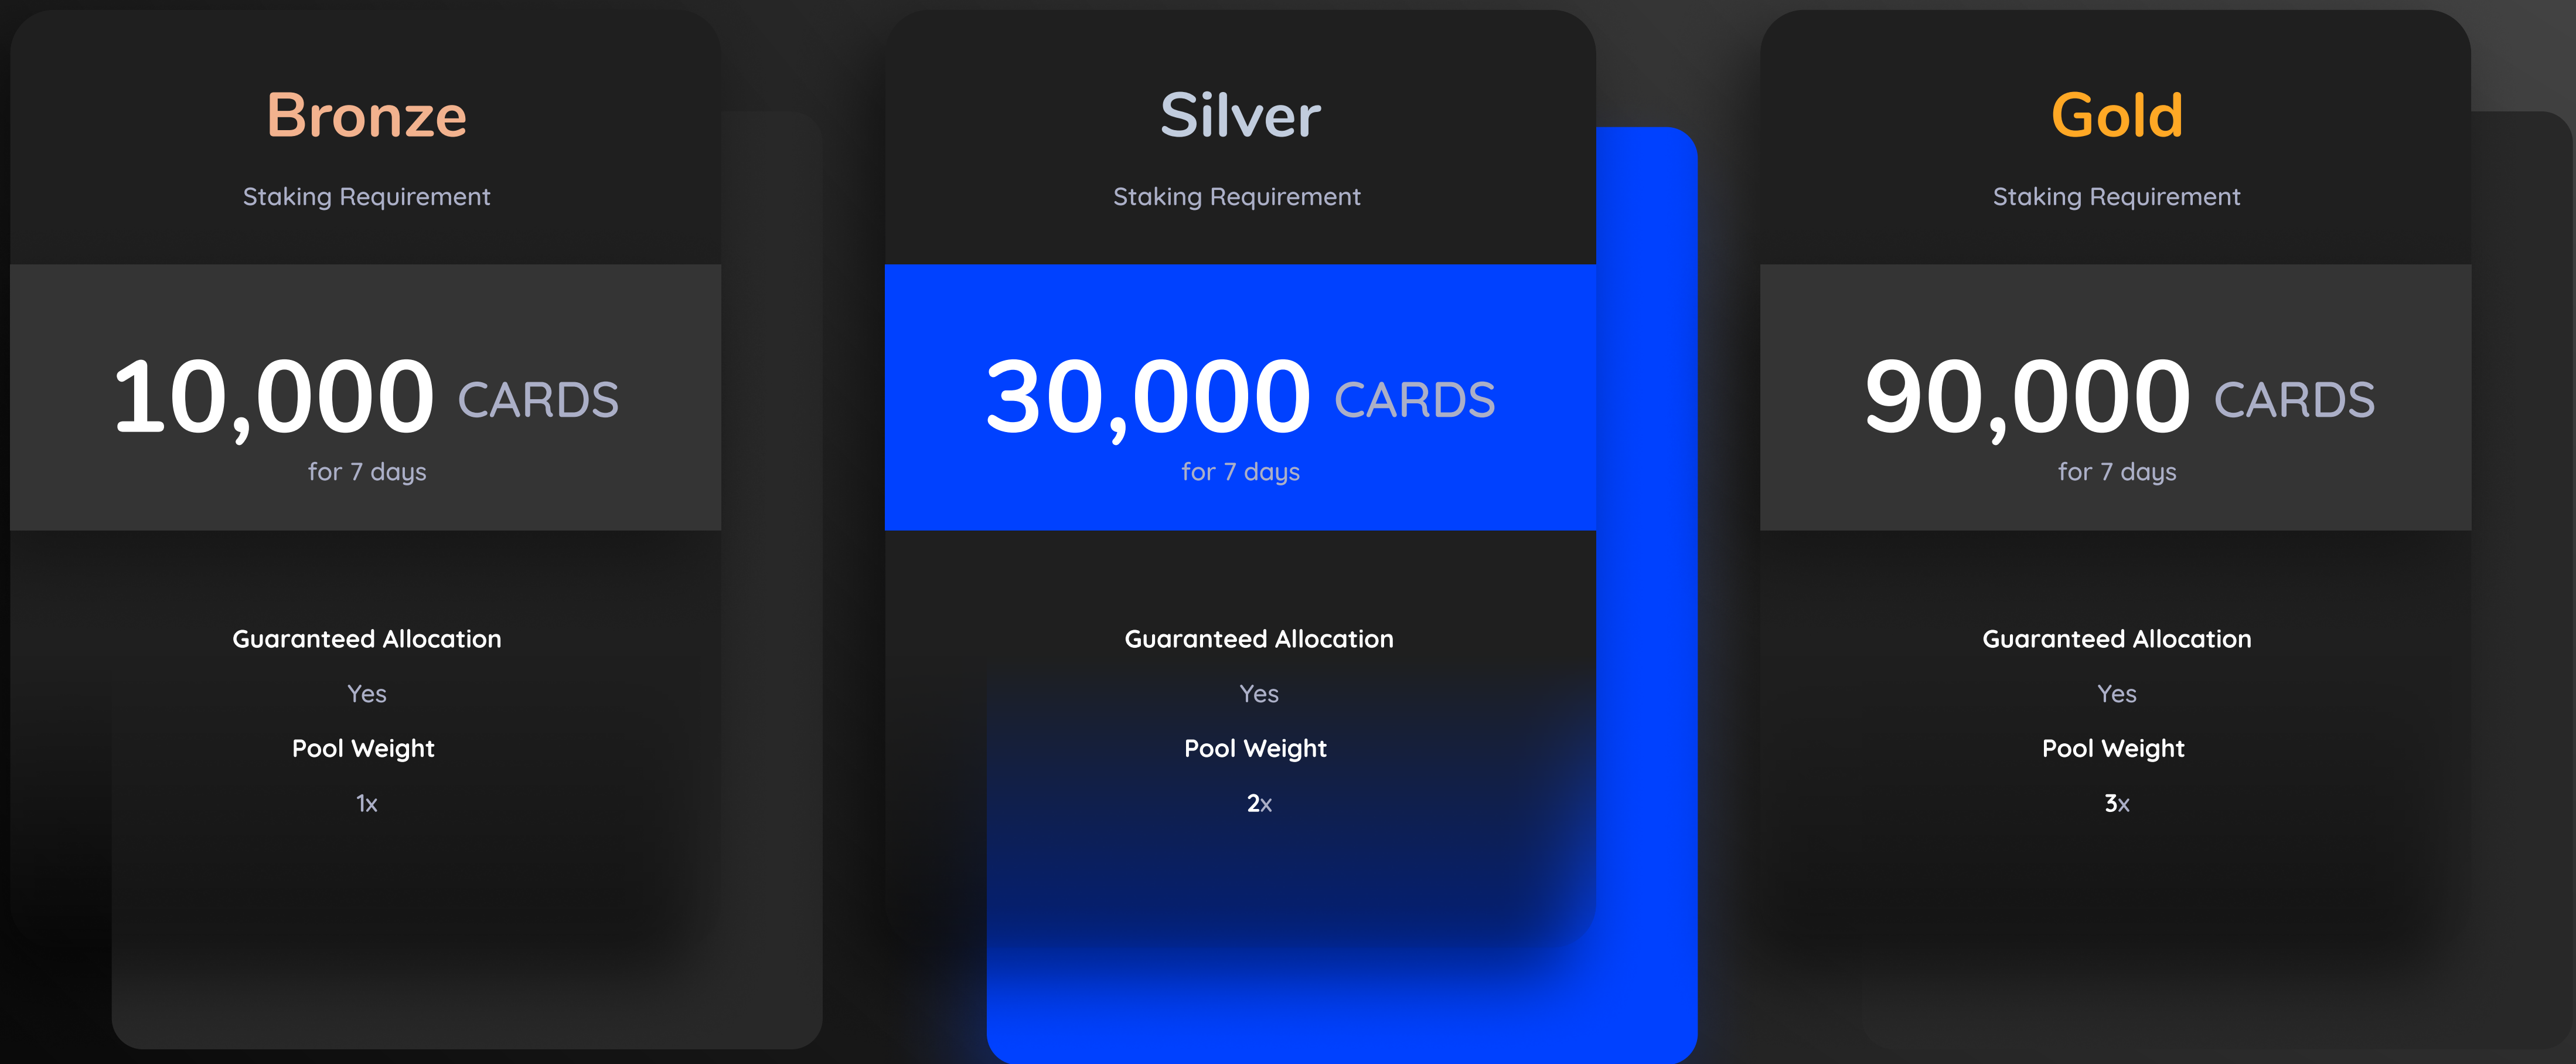

- CardStarter is a decentralized accelerator and swapping platform, connecting early stage Cardano innovators and projects with our community of donors.
- \$CARDS token holders who qualify for our tiered system are guaranteed varied allocation to early sales of projects launching through our platform.
- Each project that launches through our platform will contribute to our insurance treasury, providing donors in our community a sense of financial protection against potential project failure.*¹
- For projects choosing to launch directly to Cardano, CardStarter provides users with ERC-20 TokenVouchers. These will then be exchanged 1:1 on Mainnet deployment.*²
- Upon Cardstarter migration, auto-lock liquidity will be an optional feature for developers.
- As part of our Card Accelerator Program, successful applicants will acquire access to services provided through our partner firms. These include, but are not limited to:
 - Token Engineering
 - Security Audits
 - Graphical and Web3
 - Social Media, Awareness, and Branding support

*¹ Our Insurance treasury is established to protect donors of projects that fail as a result of team negligence. Market influence and other extraneous forces are not subject to insurance protection.

*² As per accelerator application, distribution of project mainnet token is the responsibility of the developer. Pre-migration, CardStarter will not be held liable for incorrect distribution or bridging.

CARDSTARTER Tiered System

Initial Distribution Model

2,000,000

\$CARDS

Round 1

2,000,000 \$CARDS @ \$0.10 per token (\$200k), capped at \$5000 per person
Vesting - 10% at TGE, 22.5% per month for 4 months

3,000,000

\$CARDS

Round 2

3,000,000 \$CARDS @ \$0.15 per token (\$450k), capped at \$2500 per person
Vesting - 10% at TGE, 22.5% per month for 4 months

Total Raise

650,000

\$USDT

Initial liquidity

400k (1.3m \$CARDS: ETH)

Initial circulating market cap

\$275,000
